INDIA

ITC India 2019 starts in just 2 days...

The 3rd edition of the ITC India conference is going to start in just 2 days with a full day tutorial program followed by 2 days of conference. The organizing committee is eagerly looking forward to welcoming all the attendees across the globe. Besides helping in enhancing knowledge and awareness in DFT and test domain, we hope this conference would help connect more and more engineers in this domain. The ITC US conference has successfully done this over years and this year it is celebrating it's 50th year and we have Dr. Yervant Zorian, General Chair ITC US doing a special talk on the opening day of the conference.

In addition to keynotes, invited talks, tutorials and paper sessions, we are organizing a special session this year for all the students attending the conference through fellowship program. We hope this session is going to be extremely helpful for students to get an insight into the exciting challenges and opportunities in DFT and test domain.

The registrations received so far clearly indicate that this time we would be seeing a significantly higher number of new faces in addition to folks who join us every year without fail!! If you are thinking of attending the conference and would like to review the technical sessions etc., please visit the **ITC India web page.**
